Draft for your review

Dear Dr. Ferko,

Attached is a draft on Lorentz invariants of a self-dual five-form in ten dimensions. It is circulated for your review only. **Your name does not appear in the author metadata**, and it will not unless you say in writing that you want it there.

Why you are being asked

Three reasons, in decreasing order of how much they need you.

1. **Your paper is the method’s prior art.** The enumerate-evaluate-relate workflow for tensor invariants is Elamaran, Ferko and Scarlett, PRD 114 (2026) 026016. The draft says so in the introduction and claims only the exact and certified realisation for this particular representation. If that framing understates or overstates what you did, please correct it.
2. **Two conventions need a physicist’s eye.** The bridge’s Hodge and chirality channel, and the definition of the degree-ten reachable space D_{10} . Both are internally consistent and neither has been checked by anyone who works in this area.
3. **The credit questions are yours to answer, not ours.** Whether you should be an author, an acknowledged mentor, or neither, is question 10 on the decision form and it is deliberately left blank.

What is in the package

file	what it is
Ferko_mentor_review_draft.pdf	the paper, with a draft banner on every page what to look at first, and what to be sceptical of
Ferko_review_guide.pdf	
Ferko_claim_ledger.pdf	every claim, its strength, and its certificate
Ferko_decision_form.pdf	ten questions, none pre-filled
Ferko_reproduction_quickstart.pdf	how to rerun any number yourself
Ferko_mentor_review_source.tar.gz	the LaTeX source

What you should know before reading

- Most of the code, all of the tests and the analysis behind the exact degree-ten result were written by an AI assistant under supervision. The disclosure in the package is deliberately unflattering and worth reading.
- No human has independently verified the results. Every check was written by the same system that wrote the code it checks.
- Nothing has been submitted anywhere, and nothing will be without your reply on the authorship question.

With thanks for your time,

Utsav Sunil Kumar
